

SPECTACULARS

Whether designing show stopping special effects or integrating complicated show action equipment, EPS helps its clients wow audiences time and again.

SPECIAL EFFECTS LARGE AND SMALL

- Delivering never-before-seen elements as part of entertainment productions and attractions.
- Creating robust systems that can withstand repeated use from daily performances.

SHOW SYSTEMS INTEGRATION

- Designing custom effects that communicate with all other components of the production.
- Solving needs of the show with controls that manage machinery, automation, lighting, sound, video, water effects, and more.

and Shows**

THE SKYSYMPHONY AND ATRIUM STAGE

For the center atrium of the SkyAvenue Mall, EPS designed a show-stopping spectacle that has become one of Resorts World's top attractions: the SkySymphony of 1,000 moving lights. Suspended above the mall's four-story atrium, the LED lights can travel up and down independently more than 60 feet, creating pixelized shapes and colorful patterns that are programmed to move in coordination with an original score and video on adjacent screens. EPS designed the ceiling-mounted system with an upper tier and a lower tier, each holding an array of 500 winches across the 40-foot diameter to allow for easy access during installation and maintenance. The atrium also includes a moveable stage lift system so that mall operators can bring in large set pieces underground without having to close the area to visitors.

Location:

Resorts World Genting, Malaysia

Year Opened:

2017

Services Provided:

Spectaculars
Project Management
Mechanical Design
Rigging & Inspections

Client:

Resorts World

Established in 2007 in the entertainment capital of Las Vegas, EPS is comprised of a talented team of mechanical and electrical designers, engineers, project managers, artists, technicians, riggers, and installers that are ready to work alongside our partners to take on any challenge.
